

## Ahmed Gamal AbdEl-monem

Email: ahmedgamal10078@gmail.com|+201008484956 | [LinkedIn](#) | [GitHub](#)

Location: Cairo, Egypt

### Professional Summary

Aspiring Deep Learning Engineer with hands-on experience in designing and deploying AI-powered applications, achieving up to 95% accuracy in real-world projects. Proficient in TensorFlow, PyTorch, and data science tools, with expertise in developing innovative solutions for computer vision and robotics. Passionate about leveraging deep learning to solve complex problems and advancing AI research.

### Education

Bachelor of Computer Science

Future Academy | Expected Graduation: 2025

GPA: 3.34

Key coursework: Machine Learning, Computer Vision, Data Science, Data Structures, and Algorithms.

### Technical Skills

- Programming Languages: Python (Advanced), C++ (Intermediate), Dart (Intermediate), SQL, PHP, JavaScript, HTML, CSS.
- AI/ML Frameworks: TensorFlow (Advanced), PyTorch (Advanced).
- Data Analysis Tools: NumPy, Pandas, Scikit-learn, OpenCV.
- Development Tools: Google Colab, Kaggle, Hugging Face, VS Code, IntelliJ, Anaconda.
- Version Control: Git.
- Software: Microsoft Office, Software Engineering.

### Certifications and Training

- HCIA-AI V3.5 | Huawei | 09/2024  
Completed with a focus on AI fundamentals, model development, and deployment (Top 10%).
- AICE | ALX | 07/2024  
Developed advanced projects leveraging AI techniques.
- AI Course | Pixels Egypt | 01/2024 – 02/2024  
Specialized in CNNs, data exploration, and deep learning workflows.
- Network Security | Microsoft | 02/2024 – 05/2024  
Gained proficiency in secure systems design.
- AI Course | ITI | 01/2023 – 02/2023  
Covered Neural Networks, Deep Learning, Data Preparation, and Python fundamentals.
- Microsoft Office Specialist | Future Academy | 02/2022 – 05/2022

## Professional Projects

### Real-Time Security Protection System

- Built a weapon detection model using YOLOv5 for real-time surveillance systems.
- Technologies: Python, YOLOv5.
- Achievements: Achieved 95% accuracy in identifying weapons with bounding boxes.

### Obstacle-Avoiding Car

- Programmed an Arduino-based system for autonomous obstacle avoidance.
- Technologies: Arduino Uno, Ultrasonic Sensor, C++.
- Achievements: Reduced collision rates by 90% using real-time detection algorithms.

### OCR Pipeline Development

- Designed and implemented an end-to-end OCR pipeline for Arabic script recognition using Khatt dataset.
- Technologies: Python, TensorFlow, OpenCV.
- Achievements: Achieved 92% text recognition accuracy for handwritten Arabic text.

## Professional Interests

- Artificial Intelligence: Specializing in NLP, computer vision, and edge AI.
- Data Science: Developing interactive visualization tools and actionable insights from large datasets.
- Robotics Programming: Designing and programming intelligent systems with real-time AI integration.

## Languages

- Arabic: Native.
- English: Intermediate (B1 Level).
- German: Beginner (A1 Level).
